1. The invention that is the more famous is the weel.

2. The telefone car and electric light bulb was also important inventions.

Science & Health

Cite evidence from the text to answer the question. (R.A.C.E)

Energy

Did you transfer any energy today? The answer is yes. Every second of every day, you are transferring energy. The action of lifting a pencil takes energy. The action of looking at a picture takes energy. The action of thinking about what to eat for lunch takes energy. Every action requires energy.

The energy for lifting, looking, moving, and thinking comes from food. The energy of food is stored in chemicals. As food breaks down in your body, energy produces heat and motion, and even electric currents. Electric currents send messages throughout your brain and along your nerves. Heat, movement, and electric impulses are important ways that energy moves to keep you and your friends alive.

How do you get your energy?

Who is your teacher? ☐ McPhail-Hastings ☐ Mercen ☐ Swiger
