Reading Comprehension

Part I: Annotate the paragraphs (5 points)

More than 40 fish produce electricity. The most dangerous is the electric eel, a long slimy fish that lives in South America. This snakelike fish gives off electric signals to “see” in the dark water where it lives. These signals bounce off underwater objects and help the eel find fish and frogs to eat.

Once the electric eel **locates** its prey, it fills the water with an electric shock. The organs that produce electricity are in the eel’s tail. The shock stuns or kills any small animals in the area around the eel. The electric charge is so strong it could also stun a person or knock over a full-grown horse!

Part II: Answer the questions (5 points ea.)

- 1.** The electric eel looks like a
☐ A. snake.
☐ B. fish.
☐ C. turtle.
☐ D. bird.
- 2.** The author wrote this story to
☐ A. tell about different kinds of eels.
☐ B. tell about electric eels.
☐ C. ask people to protect fish.
☐ D. explain electricity.
- 3.** In this story, the word **locates** means
☐ A. swims.
☐ B. eats.
☐ C. slides.
☐ D. finds.
