## ELA – Reading (5 points each.)

What do you think of when you hear the word “anaconda”? If you’re like many people, you think of a giant, man-eating snake that lives in the Amazon. But you would be wrong.

Although anacondas do live in the Amazon region of South America, they do not eat humans. They do eat animals as large as deer, however. An anaconda kills its prey by giving it a deadly squeeze. This **lethal** hug cuts off the victim’s air supply and blood flow.

Scientists still need to find out more about these powerful snakes. For instance, no one really knows how they reproduce.

1. How does an anaconda kill its prey?

- A. by squeezing it
- B. by biting it
- C. by drowning it
- D. by eating it

2. In this article, the word **lethal** means

- A. friendly.
- B. painful.
- C. tight.
- D. deadly.

3. The purpose of this article is to

- A. persuade you that anacondas are beautiful.
- B. inform you about anacondas in general.
- C. warn you that anacondas are dangerous.
- D. amaze you with the size of anacondas.
