

# Food Chains - Pg. 241-243

## Across

2. There are many feeding \_\_\_\_ in an ecosystem.
4. All the connected food chains put together.
7. This is at the beginning of the food chain.
9. These shows the direction energy flows.
11. The animal that can get more food is more likely to do this.
12. This goes into a spider when it eats a fly.
13. If there is only a few of one type of food, animals must do this.

## Down

1. These are at the end of every food chain.
3. Energy for producers comes from here.
5. These decompose all the organisms when they die.
6. These eat crayfish.
8. Look at the food web. If there were no mosquitoes there would be fewer of these.
10. Organisms in an ecosystem \_\_\_\_ on one another for the food they need.
