

Humans and Aquatic Systems - pg. 244-247

Across

2. 95% of the fresh water in the nation is found here.
5. This can carry soil and chemicals into lakes.
8. Scientists use these to measure lake temperatures.
9. Fertilizers and pesticides upset this in aquatic ecosystems.
11. These are materials that settle at the bottom of lakes.
13. This was dumped into Lake Erie.
14. This change can have a big effect on a lake ecosystem.

Down

1. This is oil that enters lakes from streets.
3. Lake Erie became so polluted that this dropped and fish could not survive.
4. Some of the chemicals dumped in Lake Erie are this.
6. Phosphates act as this for algae.
7. These are used to kill pests on crops.
10. Factory gases enter the clouds and make the rain into this.
12. Many of the Great Lakes border this country.
