## Estimate Quotients Using Multiples

**Find two numbers the whole-number quotient of  $142 \div 5$  is between. Then estimate the whole-number quotient.**

You can use multiples to estimate. A **multiple** of a number is the product of a number and a counting number.

**Step 1** Think: What number multiplied by 5 is about 142? Since 142 is greater than  $10 \times 5$ , or 50, use counting numbers 10, 20, 30, and so on to find multiples of 5.

**Step 2** Multiply 5 by multiples of 10 and make a table.

Counting Number	10	20	30	40
Multiple of 5	50	100	150	200

**Step 3** Use the table to find multiples of 5 closest to 142.

$20 \times 5 = \underline{100}$   
 $30 \times 5 = \underline{150}$  ← 142 is between 100 and 150.

142 is closer to 150, so  $142 \div 5$  is about 30.

**Find two numbers the whole-number quotient is between. Then estimate the whole-number quotient.**

## Estimating Quotients

Match each whole-number quotient with its best estimate. Then write the letter of the estimate on the appropriate blank to answer the question below.

- |                 |          |          |
|-----------------|----------|----------|
| 1. $342 \div 8$ | about 50 | <b>E</b> |
| 2. $93 \div 7$  | about 15 | <b>M</b> |
| 3. $125 \div 6$ | about 12 | <b>I</b> |
| 4. $74 \div 5$  | about 20 | <b>T</b> |
| 5. $275 \div 4$ | about 70 | <b>E</b> |
| 6. $35 \div 3$  | about 40 | <b>A</b> |
| 7. $481 \div 9$ | about 18 | <b>T</b> |
| 8. $127 \div 7$ | about 13 | <b>S</b> |

What did you do to find the missing word?

$\frac{\quad}{5}$      $\frac{\quad}{2}$      $\frac{\quad}{8}$      $\frac{\quad}{6}$      $\frac{\quad}{4}$      $\frac{\quad}{1}$      $\frac{\quad}{3}$      $\frac{\quad}{7}$

Name \_\_\_\_\_

## Remainders

Use counters to find the whole-number quotient and remainder.

$$9 \overline{)26}$$

- Use 26 counters to represent the dividend, 26.
- Since you are dividing 26 by 9, draw 9 circles. Divide the 26 counters into 9 equal-sized groups.

- There are 2 counters in each circle, so the whole-number quotient is **2**. There are 8 counters left over, so the remainder is **8**.

$$\begin{array}{r} 2 \text{ r} 8 \\ 9 \overline{)26} \end{array}$$

Divide. Draw a quick picture to help.

$$7 \overline{)66}$$

- Use 66 counters to represent the dividend, 66.
- Since you are dividing 66 by 7, draw 7 circles. Divide 66 counters into 7 equal-sized groups.

- There are 9 counters in each circle, so the quotient is **9**. There are 3 counters left over, so the remainder is **3**.

$$\begin{array}{r} 9 \text{ r} 3 \\ 7 \overline{)66} \end{array}$$

Use counters to find the whole-number quotient and remainder.

1.  $6 \overline{)19}$

2.  $3 \overline{)14}$

Divide. Draw a quick picture to help.

3.  $39 \div 4$

## Interpret the Remainder

When you solve a division problem with a remainder, the way you interpret the remainder depends on the situation and the question.

### Way 1: Write the remainder as a fraction.

Callie has a board that is 60 inches long. She wants to cut 8 shelves of equal length from the board and use the entire board. How long will each shelf be?

Divide.  $60 \div 8$  7 r4

The remainder, 4 inches, can be divided into 8 equal parts.

4 ← remainder  
8 ← divisor

Write the remainder as a fraction.

Each shelf will be  $7\frac{4}{8}$  inches long.

### Way 2: Drop the remainder.

Callie has 60 beads. She wants to make 8 identical bracelets and use as many beads as possible on each bracelet. How many beads will be on each bracelet?

Divide.  $60 \div 8$  7 r4

The remainder is the number of beads left over. Those beads will not be used. Drop the remainder.

Callie will use 7 beads on each bracelet.

### Way 3: Add 1 to the whole-number quotient.

Callie has 60 beads. She wants to put 8 beads in each container. How many containers will she need?

Divide.  $60 \div 8$  7 r4

The answer shows that Callie can fill 7 containers but will have 4 beads left over. She will need 1 more container for the 4 leftover beads. Add 1 to the whole-number quotient.

Callie will need 8 containers.

### Way 4: Use only the remainder.

Callie has 60 stickers. She wants to give an equal number of stickers to 8 friends. She will give the leftover stickers to her sister. How many stickers will Callie give to her sister?

Divide.  $60 \div 8$  7 r4

The remainder is the number of stickers left over. Use the remainder as the answer.

Callie will give her sister 4 stickers.

1. There are 35 students going to the zoo. Each van can hold 6 students. How many vans are needed?

## Estimate Quotients Using Compatible Numbers

**Compatible numbers** are numbers that are easy to compute mentally. In division, one compatible number divides evenly into the other. Think of the multiples of a number to help you find compatible numbers.

**Estimate.**  $6 \overline{)216}$

**Step 1** Think of these multiples of 6:

6      12      18      24      30      36      42      48      54

Find multiples that are close to the first 2 digits of the dividend.

18 tens and 24 tens are both close to 21 tens. You can use either or both numbers to estimate the whole-number quotient.

**Step 2** Estimate using compatible numbers.

$$216 \div 6$$

$$180 \div 6 = 30$$

$$216 \div 6$$

$$240 \div 6 = 40$$

So,  $216 \div 6$  is between 30 and 40.

**Step 3** Decide whether the estimate is closer to 30 or 40.

$$216 - 180 = 36$$

$$240 - 216 = 24$$

216 is closer to 240, so use 40 as the estimate.

**Use compatible numbers to estimate the whole-number quotient.**

## Division and the Distributive Property

### Divide. $78 \div 6$

Use the Distributive Property and quick pictures to break apart numbers to make them easier to divide.

**Step 1** Draw a quick picture to show 78.

**Step 2** Think about how to break apart 78. You know  $6 \text{ tens} \div 6 = 10$ , so use  $78 = 60 + 18$ . Draw a quick picture to show 6 tens and 18 ones.

**Step 3** Draw circles to show  $6 \text{ tens} \div 6$  and  $18 \text{ ones} \div 6$ . Your drawing shows the use of the Distributive Property.  
 $78 \div 6 = \underline{(60 \div 6)} + \underline{(18 \div 6)}$

**Step 4** Add the quotients to find  $78 \div 6$ .

$$\begin{aligned} 78 \div 6 &= (60 \div 6) + (18 \div 6) \\ &= \underline{10} + \underline{3} \\ &= \underline{13} \end{aligned}$$

Use quick pictures to model the quotient.

1.  $84 \div 4 = \underline{\quad}$

2.  $54 \div 3 = \underline{\quad}$

3.  $68 \div 2 = \underline{\quad}$

4.  $65 \div 5 = \underline{\quad}$

5.  $96 \div 8 = \underline{\quad}$

6.  $90 \div 6 = \underline{\quad}$

Name \_\_\_\_\_

## True or Not True?

The Associative Property of Multiplication states that when you change the grouping of factors, the product remains the same:  
 $(3 \times 4) \times 5 = 12 \times 5$ , or 60, and  $3 \times (4 \times 5) = 3 \times 20$ , or 60.

Is the Associative Property also true for division?  
 Complete Exercises 1–4.

1.  $(8 \div 4) \div 1 = \underline{\hspace{2cm}}$  and  $8 \div (4 \div 1) = \underline{\hspace{2cm}}$

2.  $(10 \div 2) \div 1 = \underline{\hspace{2cm}}$  and  $10 \div (2 \div 1) = \underline{\hspace{2cm}}$

3. When you changed the grouping in Exercises 1 and 2, what happened to the quotient?

\_\_\_\_\_

4. Now use the numbers 2, 4, and 8 to write and evaluate a division expression. Then change the grouping of the numbers and evaluate the new expression.

## Divide Using Repeated Subtraction

**You can use repeated subtraction to divide. Use repeated subtraction to solve the problem.**

Nestor has 27 shells to make bracelets. He needs 4 shells for each bracelet. How many bracelets can he make?

**Divide.  $27 \div 4$**

Write  $4 \overline{)27}$ .

### Step 1

Subtract the divisor until the remainder is less than the divisor. Record a 1 each time you subtract.

$4 \overline{)27}$	
$\underline{-4}$	1
23	
$\underline{-4}$	1
19	
$\underline{-4}$	1
15	
$\underline{-4}$	1
11	
$\underline{-4}$	1
7	
$\underline{-4}$	1
3	

### Step 2

Count the number of times you subtracted the divisor, 4.

4 is subtracted six times with 3 left.

$$\begin{array}{r} 27 \div 4 \\ \underline{6 \text{ r}3} \end{array}$$

So, Nestor can make 6 bracelets.  
He will have 3 shells left.

**Use repeated subtraction to divide.**

## Place the First Digit

**Divide.**  $763 \div 3 = \blacksquare$

**Step 1** Estimate. Then divide the hundreds.

**Think:**  $3 \times 1$  hundred = 3 hundreds  
 $3 \times 2$  hundreds = 6 hundreds  
 $3 \times 3$  hundreds = 9 hundreds

$3 \times 3$  hundreds is greater than 7 hundreds.  
 Use **2 hundreds** as an estimate.

**Step 2** There is  
 1 hundred left over.  
 Regroup 1 hundred,  
 now there are 16 tens.  
 Divide the tens.

$$\begin{array}{r} 2 \\ 3 \overline{)763} \\ - 6 \downarrow \\ \hline 16 \end{array} \leftarrow 16 \text{ tens}$$

**Step 3** There is 1 ten  
 left over. Regroup 1 ten,  
 now there are 13 ones.  
 Divide the ones.

$$\begin{array}{r} 25 \\ 3 \overline{)763} \\ - 6 \downarrow \\ \hline 16 \\ - 15 \downarrow \\ \hline 13 \end{array} \leftarrow 13 \text{ ones}$$

**Step 4** Check to make sure that the remainder is  
 less than the divisor. Write the answer.

$$\begin{array}{r} 2 \\ 3 \overline{)763} \\ - 6 \\ \hline 1 \end{array} \begin{array}{l} \leftarrow \text{Divide 7 hundreds by 3.} \\ \leftarrow \text{Multiply. } 3 \times 2 \text{ hundreds} \\ \leftarrow \text{Subtract.} \end{array}$$

$$\begin{array}{r} 25 \\ 3 \overline{)763} \\ - 6 \\ \hline 16 \\ - 15 \\ \hline 1 \end{array} \begin{array}{l} \leftarrow \text{Divide 16 tens by 3.} \\ \leftarrow \text{Multiply. } 3 \times 5 \text{ tens} \\ \leftarrow \text{Subtract.} \end{array}$$

$$\begin{array}{r} 254 \\ 3 \overline{)763} \\ - 6 \\ \hline 16 \\ - 15 \\ \hline 13 \\ - 12 \\ \hline 1 \end{array} \begin{array}{l} \leftarrow \text{Divide 13 ones by 3.} \\ \leftarrow \text{Multiply. } 3 \times 4 \text{ ones} \\ \leftarrow \text{Subtract.} \end{array}$$

$$\begin{array}{r} 254 \text{ r}1 \\ 3 \overline{)763} \end{array} \quad 1 < 3$$

**Divide.**

## How Many Digits?

Circle how many digits will be in the quotient. Find the quotient to check that you are correct. Then, look at the riddle below. To answer the riddle, write the letter of the number you circled on the line above the exercise number.

1.  $346 \div 2 = \underline{\hspace{2cm}}$

1 = P    2 = R    3 = N

2.  $108 \div 9 = \underline{\hspace{2cm}}$

1 = T    2 = A    3 = C

3.  $652 \div 4 = \underline{\hspace{2cm}}$

1 = L    2 = I    3 = H

4.  $210 \div 5 = \underline{\hspace{2cm}}$

1 = R    2 = S    3 = N

5.  $120 \div 8 = \underline{\hspace{2cm}}$

1 = S    2 = C    3 = W

6.  $162 \div 6 = \underline{\hspace{2cm}}$

1 = G    2 = E    3 = J

7.  $420 \div 7 = \underline{\hspace{2cm}}$

1 = C    2 = M    3 = E

8.  $444 \div 4 = \underline{\hspace{2cm}}$

1 = K    2 = E    3 = I

## Divide by 1-Digit Numbers

**Divide.**  $766 \div 6 = \blacksquare$

**Step 1** Use place value to place the first digit.

**Think:** 7 hundreds can be shared among 6 groups without regrouping.

$$\begin{array}{r} 1 \\ 6 \overline{)766} \end{array} \quad \leftarrow \text{The first digit is in the hundreds place.}$$

**Step 2** There is 1 hundred left over. Regroup 1 hundred, now there are 16 tens. Divide the tens.

$$\begin{array}{r} 1 \\ 6 \overline{)766} \\ - 6 \phantom{0} \\ \hline 16 \phantom{0} \end{array} \quad \leftarrow 16 \text{ tens}$$

$$\begin{array}{r} 12 \\ 6 \overline{)766} \\ - 6 \phantom{0} \\ \hline 16 \phantom{0} \\ - 12 \phantom{0} \\ \hline 4 \phantom{0} \end{array} \quad \begin{array}{l} \leftarrow \text{Divide 16 tens by 6.} \\ \leftarrow \text{Multiply. } 6 \times 2 \text{ tens} \\ \leftarrow \text{Subtract.} \end{array}$$

**Step 3** There are 4 tens left over. Regroup 4 tens, now there are 46 ones. Divide the ones.

$$\begin{array}{r} 12 \\ 6 \overline{)766} \\ - 6 \phantom{0} \\ \hline 16 \phantom{0} \\ - 12 \phantom{0} \\ \hline 46 \phantom{0} \end{array} \quad \leftarrow 46 \text{ ones}$$

$$\begin{array}{r} 127 \\ 6 \overline{)766} \\ - 6 \phantom{0} \\ \hline 16 \phantom{0} \\ - 12 \phantom{0} \\ \hline 46 \phantom{0} \\ - 42 \phantom{0} \\ \hline 4 \phantom{0} \end{array} \quad \begin{array}{l} \leftarrow \text{Divide 46 ones by 6.} \\ \leftarrow \text{Multiply. } 6 \times 7 \text{ ones} \\ \leftarrow \text{Subtract.} \end{array}$$

**Step 4** Check to make sure that the remainder is less than the divisor. Write the answer.

$$\begin{array}{r} 127 \text{ r}4 \\ 6 \overline{)766} \end{array} \quad 4 < 6$$

**Step 5** Use multiplication and addition to check your answer.

$$\begin{array}{r} 127 \leftarrow \text{quotient} \\ \times 6 \leftarrow \text{divisor} \\ \hline 762 \\ + 4 \leftarrow \text{remainder} \\ \hline 766 \leftarrow \text{dividend} \end{array}$$

**Divide and check.**

1.  $4 \overline{)868}$

2.  $2 \overline{)657}$

3.  $7 \overline{)8,473}$

## What Is Left Over ?

Find the “leftover” in each situation. Then use the code key to see which letters match each of your answers. Write the letters in order of the exercises to find the answer to the riddle.

1. Jude puts 6 lemons in each bag. If he has 170 lemons, how many will be left over?

---

2. Selena has a piece of ribbon that is 130 inches long. If she wants to make bracelets that are 9 inches long, how many inches of ribbon will be left over?

---

3. Justin prepares 229 hamburgers for a company picnic. If buns come in packages of 8, how many will be left over?

---

4. Mrs. Bradley has \$204 to divide equally between her 7 grandchildren. How many dollars will she have left over?

---

5. Mr. White has 115 tulips for bouquets. He puts 9 tulips in each bouquet. How many tulips will be left over?

---

1	2	3	4	5	6	7	8

## Problem Solving • Multistep Division Problems

There are 72 third graders and 84 fourth graders going on a field trip. An equal number of students will ride on each of 4 buses. How many students will ride on each bus?

Read the Problem	Solve the Problem								
<p><b>What do I need to find?</b></p> <p>I need to find the number of <u>students</u> who will ride on each bus.</p>	<p>I can model the number of students in all using a bar model.</p> <table border="1" style="margin: 10px auto; width: 80%;"> <tr> <td style="text-align: center; width: 50%;">72</td><td style="text-align: center; width: 50%;">84</td></tr> <tr> <td colspan="2" style="text-align: center; border-top: 1px solid black;">156</td></tr> </table>	72	84	156					
72	84								
156									
<p><b>What information do I need to use?</b></p> <p>There are <u>72</u> third graders and <u>84</u> fourth graders. There will be <u>4</u> buses.</p>	<p>I can model the number of buses and divide to find the number of students on each bus.</p> <table border="1" style="margin: 10px auto; width: 80%;"> <tr> <td style="text-align: center; width: 25%;">39</td><td style="text-align: center; width: 25%;">39</td><td style="text-align: center; width: 25%;">39</td><td style="text-align: center; width: 25%;">39</td></tr> <tr> <td colspan="4" style="text-align: center; border-top: 1px solid black;">156</td></tr> </table>	39	39	39	39	156			
39	39	39	39						
156									
<p><b>How will I use the information?</b></p> <p>I will make a bar model for each step. I will add <u>72 and 84</u> to find the total number of students. I will divide by <u>4</u> to find how many students will ride on each bus.</p>	<p>So, <u>39</u> students will ride on each bus.</p>								

- Miranda has 180 beads for making jewelry. She buys 240 more beads. She wants to store the beads in a case with 6 sections. She wants to put the same number of beads in each section. How many beads should Miranda put in each section?

- All 203 students at Polk School eat lunch at the same time. One day 19 students were absent. If 8 students sit at each table in the lunchroom, how many tables were used that day at lunch?

## It's a Riddle!

Solve each problem. Look for the answer in the riddle below and write the letter of the problem on the line. Not all letters will be used.

<b>C</b>	Maria takes 24 photos at the circus and 72 photos on her vacation. If each page in her scrapbook can hold 6 photos, how many pages can Maria fill?  _____	<b>I</b>	Carmen and Wayne sell 25 birdhouses at a craft fair. They share the money equally. If each birdhouse costs \$14, how much money will Carmen and Wayne each receive?  _____
<b>R</b>	José uses 3 flowers for each corsage he makes. He has orders for 18 corsages each from two different stores. How many flowers will he need?  _____	<b>L</b>	Mr. Davis sells sleeping bags. He has 30 red sleeping bags and 26 green sleeping bags to put on shelves. Each shelf can hold 8 sleeping bags. How many shelves can he fill?  _____
<b>Y</b>	Taren makes 62 chocolate chip cookies and 74 oatmeal cookies. If she places 8 cookies on a plate for the bake sale, how many plates will Taren need?  _____	<b>T</b>	Keisha bought 10 bags of apples. There are 15 apples in each bag. If Keisha repacks the apples into 5 bags, how many apples will be in each bag?  _____
<b>N</b>	Chan and his two sisters make and sell jewelry. They sell each piece of jewelry for \$9 and agree to share the money equally. If they sell 38 pieces of jewelry in all, how much money will each person receive?  _____	<b>E</b>	Linh orders 16 blueberry muffins and 24 cranberry muffins from a bakery. The bakery places 8 muffins in each package. How many packages will Linh have to pick up?  _____

Which city has no people?
